

REDROB TALENT INTELLIGENCE

Candidate ranking that behaves like a strong recruiter

Built for the Senior AI Engineer founding-team JD: not keyword search, but evidence-weighted understanding of search/ranking systems, product shipping, evaluation maturity, hireability, and trap avoidance.

What the JD actually asks for

Production search

Embeddings, retrieval, ranking, recommender systems, hybrid/vector infrastructure.

Shipper mindset

Python, backend/data infra, production ownership, product-company judgment.

Evaluation maturity

NDCG, MRR, MAP, offline benchmarks, A/B testing, feedback loops.

REDROB TALENT INTELLIGENCE

Architecture

- Stream `candidates.jsonl` line-by-line; keep only the strongest shortlist in memory.
- Extract evidence from profile, career history, skills, and Redrob behavioral signals.
- Blend five deterministic dimensions, then apply trap and consistency penalties.
- Generate reasoning only from facts found in the candidate profile.

REDROB TALENT INTELLIGENCE

Scoring model

35%

Production search/retrieval/ranking evidence.

20%

Applied ML and product engineering depth.

15%

Evaluation maturity.

Remaining 30% covers availability, logistics, trust, profile completeness, and anti-honeypot consistency.

REDROB TALENT INTELLIGENCE

Trap defenses

- Downranks AI skill stuffing when career evidence is weak.
- Penalizes non-engineering titles with dense AI keyword lists.
- Detects stale activity, low response rates, long notice, and inconsistent skill/role durations.
- Separates CV/speech/robotics-heavy profiles from the JD's NLP/retrieval/search mandate.

REDROB TALENT INTELLIGENCE

Runtime and validation

100,000

Candidates processed.

39.2s

CPU-only ranking runtime.

100

CSV rows, ranks 1-100, monotonic scores.

Sample top candidates

RANK	CANDIDATE	SCORE	EVIDENCE
#1	CAND_0081846 Lead AI Engineer, 6.7 yrs	0.9185	semantic search, dense vector recall, embeddings, retrieval
#2	CAND_0077337 Staff Machine Learning Engineer, 7.0 yrs	0.9094	semantic search, recommendation system, dense vector recall, embeddings
#3	CAND_0008425 Senior NLP Engineer, 7.8 yrs	0.8891	candidate-JD matching, semantic search, dense vector recall, retrieval

REDROB TALENT INTELLIGENCE

Why this can win

The submission is reproducible, fast, and defensible in interview. It avoids the obvious keyword trap, uses the behavioral signals Redrob intentionally provided, and produces explanations a recruiter can audit against the source profile.
